

“At Quinta da Bela Vista, we are committed to adopting sustainable practices that minimise the environmental impact of our activities, strictly complying with legislation and contributing to the preservation of the surrounding natural environment. Located in a privileged area, surrounded by lush green gardens with sea views, we recognise our responsibility to protect this unique environment for future generations.”

Energy Efficiency and Carbon Emission Reduction

We are committed to reducing energy consumption and carbon emissions by using efficient lighting and low-consumption climate control systems. We monitor our energy use and plan to adopt renewable energy sources in the future.

Sustainable Water Management

We have implemented water-saving and sustainable management measures. All taps and showers are equipped with low-flow devices, and garden irrigation is carried out using Levada water. We encourage our guests to reuse towels and bed linens, helping to conserve this essential resource.

Waste Management and Plastic Reduction

We provide waste separation bins in various areas, encouraging recycling and reducing the volume sent to landfill. We have replaced disposable plastics with biodegradable and recyclable alternatives, aiming for zero waste.

Sustainable Transport

We offer complimentary transport for guests and provide information on public transport options to reduce environmental impact and promote low-carbon mobility. We plan to install charging points for electric vehicles, available to both guests and staff.

Social Responsibility and Environmental Awareness

We prioritise local, sustainable, and organic suppliers, supporting the regional economy and reducing our ecological footprint. We use biodegradable cleaning products to protect staff, guests, and the environment. We invest in hiring local residents and in the continuous training of our staff in environmental best practices. We encourage guests and partners to participate in our sustainability initiative.

Transparency and Continuous Improvement

We continuously monitor and improve the environmental impact of our activities, adjusting goals and actions based on results. We plan to conduct internal audits and publish an annual report to demonstrate our progress.
